Lead Dampcourse

- . Lead is a natural metal. It is the most recycled & recovered building material used today. (minimal waste)
- . Lead will last longer than any synthetic substitute.
- . **malleable:** easy to use.
- . **durable:** its fail rate is negligible and its **resistance to corrosion** by the atmosphere means that Lead sheet will **outlast any alternative** building material.
- . Lead offers the **best value** in terms of **longevity and ecology** compared to other products used as substitutes.
- . **Lead is 100% recyclable.**
- . synthetic materials developed as a potential alternative to Lead have significant impacts on global warming during manufacture.
